

# Your Module Here

IQ LINK has been designed from the ground up to be extensible, which means IQ LINK can be whatever you make it.

We've built our business on custom software development and have designed IQ LINK to draw information from wherever you might have it.

We recognise that it's important to ensure you maximise the value you receive from your existing systems. Let us write a custom IQ LINK module that enables you to access your existing data more simply, whether from PCs or IQ LINK kiosks.

And the best part? Now your data, previously hidden behind some cryptic interface, can become available to all your users—even those with no computer skills at all!

YOUR SYSTEMS, SIMPLIFIED

# You know better than we do how we can help.

In today's connected world, every business has a wide variety of different systems.

Some are custom-built (even in-house). Others are massive third-party systems with data in enormous databases. It's our goal to unite all your information in one place.

It's a big task, we know, but we've made it work. While we can build you a full-featured module to your exact specifications, most of the time you already have the information maintained in an existing system. Rather than starting from scratch, we work hand-in-hand with third party developers to collect your existing information in IQ LINK.

We've worked in partnership with the developers of many other systems (from the very large to the very small) to integrate our customers' data into our interfaces. However you currently store your training information, your corporate structure, your inventory or your accounts; if you want the information accessible to your entire workforce, we can help.

When all your information is presented in a single, convenient location (and in a single, consistent way), your workforce requires less training to be more productive.

Expand the value of your existing systems by putting Your Module Here.

## KEY BENEFITS

- Get additional value from your existing applications and systems.
- Drive adoption of IQ LINK by customising it for your business.
- Integrate multiple similar systems in new ways (e.g. add a hardware smartcard reader to your IQ LINK kiosk and use your employee access cards to authenticate users for other systems).
- Provide all your information in a consistent way to minimise training costs and limit confusion.
- Make your information available to new users who don't have access to PCs.
- Unify your information systems so as to build user confidence in a wide array of systems.

## SOME IDEAS

- Let your employees access their training records and identify areas for improvement. Then let them book their next training session.
- Let your IQ LINK kiosks operate as access control points for CARDAX or similar security systems with an optional smartcard reader.
- Allow your users to clock in and out and record their time on site.
- Perform interactive video site inductions for visitors.
